## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

*A person shall be entitled to a patent unless --*

*(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.*

2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Rappaport et al. (U.S. Patent No. 6,625,454).

Regarding claims 1-20, Rappaport discloses a method and a system for designaing or deploying a communications network which considers frequency dependent effects, i.e., by monitoring network link perfomance between mobile users while still keep maintaining maximum capacity and efficiency, or namely, network optimization; and estimates of link budgets are calculated, if a proposed change is better than the current network deployment, the system can automatically adjust and perform the optimization process. In other words, based on the network prediction or actual link performance, the proposed change can be made to the system based on

link performance (see Figs. 1-21, and col. 3/line 57 to col. 5/line 10; col. 14/line 8 to col. 16/line 23, and col. 30/line 56 to col. 31/line 35).

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Rappaport (US Patents 6,317,599 B1 & 6,499,006 B1), Virgil et al. (US Patent 5,493,679) and Clarkson et al. (US Patent 6,631,267 B1) disclose systems with network designing tools.
